1. Measure and mark out area to be cut.									
2. Inspect tool and ensure it is in proper working order.									
3. Secure materia	3. Secure material to work bench or flat working surface. Ensure area under cut								
line is clear.									
4. Set blade to proper dept for material.									
5. Align saw to cut line.									
6. Using one hand lift the guard, ensure alignment, tilt saw to ensure blade is									
clear of the ma	clear of the material.								
7. Depress trigge	7. Depress trigger to start saw, once saw is at operating speed, slowly lower saw								
to material and	l begin	cutting.							
8. Keep all cords	8. Keep all cords clear of the cutting area.								
9. Move the tool forward over the material, keeping it flat and advancing smoothly									
until the cut is complete.									
10. Do not twist th	10. Do not twist the saw to change the cut or alignment. Wait until the blade stops,								
withdraw the s	withdraw the saw, realign saw and start the cut again.								
11. To avoid kick back use two hands to operate the saw, one on the trigger and									
one on the front knob handle. Do not cut above chest height.									
12. Ensure the bottom guard is in place before setting the saw down.									
13. Use a hand saw or another tool to complete corner cut if necessary.
